

MO/Notify

Get the app. Stop the spread.

Use your phone to **slow the spread of COVID-19** in your community.

- ▶ **Android users:** Download MO/Notify on the Google Play Store.
- ▶ **iPhone users:** Turn on Exposure Notifications in Settings.

MO/Notify alerts you if you've **been exposed**.

Using Bluetooth technology, MO/Notify lets you know if you've been in close proximity for more than 15 minutes to someone who tests positive for COVID-19, even if you don't know them. That means you can isolate and get tested to avoid spreading it to others.

MO/Notify is **voluntary and private**.

MO/Notify doesn't track your location or reveal your identity. Only anonymous data is exchanged. Plus, you can enable or disable exposure notifications, meaning you can opt-in or opt-out at any time.

MO/Notify can help **stop COVID-19 hotspots**.

The more people who use the app, the more we can protect against a surge in cases in our area. Not only will you get alerted if you've been exposed, but you can also let others know if you test positive without revealing your identity or location history.

MO/Notify is **free**.

You can download it for free via the Google Play Store (Android) or simply turn on Exposure Notifications in Settings (iOS).

Get **MO/Notify** today!
